

WE GOT THE JOB!

Tysons East Transmission Main Segment 3

We are pleased to announce that Fairfax County Water Authority has awarded Shirley Contracting Company a \$2.2 million contract for the Tysons East Transmission Main Segment 3 Project located in McLean, Va.

Shirley will complete improvements to the Fairfax Water's main line between Westpark Drive and Old Meadow Road. The scope of work includes installing 1,900 linear feet of 24-inch ductile iron water main piping that will connect to an existing 42-inch water main. The project team also will construct three, 42-inch diameter trenchless crossings that will total 1,000 linear feet and include launching and receiving pits. Additionally, the team will install an 8-by-16-foot pressure reduction vault with associated piping and fitting. Other aspects of the project include corrosion control, water main related appurtenances, and the restoration of disturbed areas.

Construction will begin this month and completion is scheduled for July 2013.

Congratulations to everyone involved in this winning effort!
